🖵 Creating Order class

in list <u>DONE</u>

DUE DATE

☐   May 21 at 12:00 AM   COMPLETE   ⌄

☰ Description   Edit

- implement initialisation with no arguments
- create order_ ingredients attribute - hash.
- create has_order attribute - boolean - default value 'false'.
- implement add_order_ingredient method, should receive name and quantity as arguments and add as a hash to the class variable order ingredients, also update the has_order class variable to 'true'.
- implement clear_order method to erase the value of the class variable order ingredients and update the has_order class variable to 'false'.
- implement get_order_ingredients method to return the order_ingredients class variable.
- implement display method + table implementation to print a header, name and quantity from each hash of the order_ingredients class variable.
